SUMMARY

AI Systems Architect and Product Director with **230+ Android apps live on Google Play** across two developer accounts. I translate real human problems into precise specifications, direct specialized AI coding agents, and own device verification and release quality from idea to upkeep.

KEY RESULTS

230+ Android apps live on Google Play	2 Google Play developer accounts	36 languages the apps ship in	1 person directing the AI agents behind them all

EXPERIENCE

Founder, AI Systems Architect & Product Director — SAIFULLAH.AI

2023 – Present · Dhaka, Bangladesh · remote

- Set product vision, priorities, specifications and quality standards for a portfolio of 230+ live Android apps.
- Direct multiple AI coding agents through research, design, implementation, review, testing, localization and release.
- Built the verification pipeline: signed release builds tested on real phones and tablets, with recorded evidence, before every release.
- Publish and maintain every app across two Google Play developer accounts, in 36 languages.
- Also shipped desktop tools for Windows, Linux and macOS, the DonateBloodNow web platform, and a privacy-policy hub for all published apps.

Independent Freelance & Digital Work

Contract and marketplace projects · before 2023

- Delivered independent client work: requirements, communication, iteration and delivery.

Digital Business Operations — family textile business

2022 – 2023

- Managed the online sales platform for textile products.
- Handled digital marketing and customer service.

Administrative & Business Support — various organizations

2015 – 2022

- Administrative support, document management, client relationships and financial record keeping.

WHAT I DO

Product strategy

- Find real-world problems and design the solution.
- Define features, user flows and product scope.
- Turn product intent into clear specs for AI agents.
- Test every product by hand before release.

Delivery & release

- End-to-end ownership, from idea to maintenance.
- Localization and multilingual releases.
- Google Play publishing and release management.
- User feedback and product improvement.

Technical systems

- Local-first collaboration and CRDT sync.
- Shamir sharing, OPRF matching, local encryption.
- On-device FFT, audio and motion-signal processing.
- OCR, graph digitization and numerical solvers.
